EDUCATION

High School

Assumption College
GPA 3.78

Thammasart University

Faculty of Science and Technology
Computer Science major
(Software Engineering)
GPA 3.68

Basic Social Skills

- Leadership Skills
- Adapting to new places
- Flexibility in adjusting work plans when problems arise.
- Communication Skills
- Good at pressure handling
- Be responsible for assigned tasks
- Communication in English

Vision

I am a student studying about Software engineering and management. In the past, I have studied and done many different types of projects. Therefore, I would like to apply the knowledge I have gained to real work and I am ready to learn new skills that will be gained from doing this cooperative education.

Programming Languages I have used before.

- C
- Java
- Python
- C++
- Java Script
- HTML&CSS

My Project Experiences

- **Website for submitting requests within the university. (Mini project)**

In this project, I played my role as project owner all team members were random by teacher, so the problem was that we didn't know each other, and it was hard to communicate and working as a team.

As a project manager, my task is to mediate discussions or distribute tasks to team members so we can work more like a team.

So, I started to open the topic of various conversations about work. In the beginning, although there were not many people who dared to speak or express their opinions, later on, they began to express themselves more.

As a result, at the end we were successful because of the share working and having more conversations so we could help each other when some of us engaged in a problem.

■ My Project Experiences

- **Website for posting/selling products (Mini project)**

In this project, I met a perfect team for doing a project in university, we communicated with no problem at all shared work and felt free to express our ideas. The point of this project is to develop a web application by using the scrum method so we learned how to use a scrum method, do stand-up meetings, sprint planning, sprint reviews and sprint retrospectives.

- **Website for booking bus tickets. (Mini project main focus on database)**

As the title, In this project, we mainly focus on how can we use the database to create a booking website there are not many problems in doing this project, My role is to code some backend dev and design a database to achieve Third Normal Form (3NF) involves organizing data in a way that eliminates redundant information and dependency issues.
